

Section 153 - Contractor Quality Control

In response to comments received at the Contractor Conference, subsection 153.02 - Quality Control, (a) Personnel, (1) Quality Control Manager will be revised as follows:

153.02 Quality Control.

(a) Personnel. The Quality Control Manager or the Quality Control Staff is the Government's primary point of contact for all quality control related issues.

(1) Quality Control Manager. Furnish a contractor quality control manager with at least two years of direct experience supervising or managing construction quality control or quality assurance programs on highway or bridge construction projects. The contractor quality control manager must also have one of the following educational or experience requirements

- a. A four year graduate of a civil engineering, civil engineering technology, construction management, or construction engineering program
- b. 7 years experience as a superintendent of a road or highway construction firm
- c. A level four-highway construction or highway materials NICET certification.
- d. 10 years experience as a highway construction inspection or materials quality control supervisory technician.

Individuals that have high levels of supervisory field experience in the inspection or testing fields of highway or bridge construction may qualify as Quality Control Manager.
